The Transformation of Learning with the Use of Educational Technology

Robust technology foundation is built with an ASUS solution, to cultivate digital savvy students for the future of work.

Organization Needs

Thongphaphomwittaya School needed a solution that would enable learning in leading technology fields such as artificial intelligence. The requirement was a digital learning solution that provides the performance and flexibility needed for classrooms where information technology is the focus.

Organization results

· Enable 800+ high school students to learn skills related to the field of artificial intelligence

· Gain stable internet connection to ensure uninterrupted online lessons

· Lower total ownership cost with after-service package

Solution

· ExpertCenter D340MC

· ASUS Premium Care Package

Industry : Education
Country : Thailand

Thongphaphomwittaya School

"

We have decided to choose ASUS computers for our classrooms after quality and price assessments."

- Yongyut Songpayo,
  Director, Thongphaphomwittaya School

Thongphaphomwittaya School is a junior and senior high school in Kanchanaburi Province of Thailand that has set new goals for the 2021-22 year.

"Beginning this fall semester, we will be working to improve information technology with the support of the appropriate use of technology," explains Director Yongyut Songpayo. "We will include coding as well as creating awareness of the role of AI in the future."

Yongyut notes that he feels a responsibility to prepare students in this are of education so they can compete on the world stage. The school therefore has a plan to provide thorough and sufficient computer services for all students.

Basic today is a beautiful future

In the past, Thongphaphomwittaya School has promoted the teaching of coding, both online and offline. In the past, practical training in the classroom began with students in junior high school (grade 1) and senior high school (grade 4). The problem was that there were not enough computers for all students. In addition, stable internet connections were also an issue in the area where the school was. These problems presented major obstacles to the teaching and learning of subjects related to computers and technology.

Outstanding specifications, durability, and excellent service.

Today, Thongphaphomwittaya School is increasing the number of computers available for student, and there are plans to make computers an integral part of learning at all levels.

"We have decided to choose ASUS computers for our classrooms after quality and price assessments," says Director Yongyut Songpayo. "When comparing the computers in the same price group, the ASUS D340MC model is clearly an outstanding choice in terms of performance and durability, and we also know ASUS has a great reputation when it comes to after-sales service."

"

When comparing the computers in the same price group, the ASUS D340MC model is clearly an outstanding choice in terms of performance and durability, and we also know ASUS has a great reputation when it comes to after-sales service."

- Yongyut Songpayo,
  Director, Thongphaphomwittaya School

The ASUS D340MC is ideal for education environments because of its reinforced construction which has been tested and proven to be tough enough for any classroom. The D340MC also uses the finest components, such as 100% solid capacitors and a reliable, industry-leading ASUS motherboard, which ensures performance and maximum longevity. The low total cost of ownership and a service package which assists school IT administrators in maintaining and repairing education devices are key benefits to schools everywhere.

"The school has a relatively limited budget," Songpayo says. "Therefore, we have to utilize every dollar wisely, making sure that our purchases benefit the students, teachers, and the community at large."

Today, ASUS computers have become a brand that many schools have turned to with confidence, delivering education-focused technology to help prepare young learners for the future.
